

# A guide to sustainability appraisal...

does your regeneration project support truly *sustainable* communities in the South West?

Will it meet local workforce needs in ways that are fit for the future?

Will it offer everyone, satisfying, fairly paid work?

Will it  
promote the  
use of locally  
sourced  
goods and  
services?

Will it support learning & skills for sustainable development?

Will it reduce inequalities in meeting everyone's basic needs?

Will it offer car-free access/  
reduce  
distances  
travelled to  
access  
services and  
amenities?

Will it prevent  
poor health?

Will it reduce pollution and  
climate change?

Will it use natural resources efficiently?

Will it enhance  
biodiversity?

Will it reduce waste?

Will it make things safer?

Will it support local distinctiveness?

Will it provide  
arts and sports  
opportunities?

Will it help everyone to participate  
in local decision making?

**...and finally**

**will it look after the needs of future generations?**
